VUA-SEN307 — Week 5 Practical

The EER diagram for week 05 was generated from the physical database tables using reverse engineering as instructed. Compared with the week04 diagram, the updated design follows the class reference schema and includes the phone column in the Student table and the CourseAllocation junction table. This weeks schema contain CourseAllocation while that of week04 contains CourseLecturer.These changes were made to meet the week05 practical requirements.

Part 3: Constraint Testing Results

The following tests were performed to verify that the database constraints were working correctly.

Test	Constraint	Error Code	Error Message
1	NOT NULL	1048	Column `dept_name` cannot be null.
2	CHECK	3819	Check constraint `chk_credit_units` is violated.
3	FOREIGN KEY	1452	Cannot add or update a child row: a foreign key constraint fails.
4	ENUM	1265	Data truncated for column `gender` at row 1.
5	UNIQUE	1062	Duplicate entry 'Software Engineering' for key 'department.dept_name'.

Empty Table Verification

Table	Record Count
Department	0
Course	0
Student	0
